

Mohammed Hazeem Hafsa

Software Engineer · Full-Stack

078 424 7939 | hafshazeem2001@gmail.com | <https://hfs-hzm.github.io/portfolio/> | Matale, Sri Lanka

PROFESSIONAL SUMMARY

Motivated Software Engineer with a BSc(Hons) in Software Engineering. With a strong academic foundation and extensive hands-on experience building full-stack applications across Java, PHP, and React ecosystems. I have also completed projects on Hotel management systems, multi-vendor e-commerce marketplaces, POS systems, real-time queue management, and AI/ML-powered fraud detection in Sinhala. A dedicated self-starter committed to clean architecture, continuous learning, and delivering impactful real-world software solutions.

PROJECTS

01 — Hotel-App — Full-Stack Hotel Management System

[Java 17](#) · [JSP](#) · [Servlets \(MVC\)](#) · [MySQL 8](#) · [Apache Tomcat 9](#) · [JDBC](#) · [BCrypt](#) · [PayHere](#) · [ZXing \(QR\)](#) · [JavaMail](#) · [Apache Commons FileUpload](#) · [Maven](#) · [Eclipse IDE](#)

Comprehensive multi-role hotel management platform covering online menu browsing, table reservations, dine-in/takeaway ordering, live delivery tracking, and payment gateway integration via PayHere. Supports loyalty points and promo codes. Dedicated dashboards for Admin, Customer, and Delivery Rider roles. Role-based access control and a robust service layer with DAOs, filters, and servlet-based controllers. Deployed on Apache Tomcat 9 with a MySQL 8 backend.

02 — Smart-Queue-System — Real-Time Queue Management

[React.js](#) · [React Router](#) · [Context API + useReducer](#) · [LocalStorage](#) · [Web Audio API](#) · [BroadcastChannel API](#)

Real-time queue management system with Patient and Admin roles across Doctor, Pharmacy, and Lab departments. State managed globally with Context API and useReducer. Live queue updates broadcast across browser tabs via the BroadcastChannel API; audio alerts powered by the Web Audio API. Persistent session state via LocalStorage; role-based routing through React Router.

03 — SOLE Brand — Shoe E-Commerce Platform

[PHP 8](#) · [MySQL](#) · [HTML5](#) · [CSS3](#) · [JavaScript \(Vanilla\)](#) · [XAMPP](#) / [Apache](#) · [PDO](#) · [PHPMailer](#)

Full-stack shoe e-commerce storefront with Admin and Customer roles. Features product catalogue management, shopping cart, order processing, and secure user authentication. Database access secured via PDO prepared statements. Transactional emails handled by PHPMailer. Admin panel provides inventory control and order fulfilment workflows. Deployed on XAMPP/Apache with a MySQL backend.

04 — Ebook-App — Ebook Management System

[Java](#) · [JSP](#) · [Servlets](#) · [PostgreSQL](#) · [Tomcat 9](#) · [JSTL](#) · [jBCrypt](#) · [Maven](#)

Ebook management platform with Admin and User roles supporting full CRUD operations, keyword search, and in-browser PDF reading and download. Secure password hashing via jBCrypt; role-based access control enforced through servlet filters. Built on Java MVC with JSP/JSTL views and a PostgreSQL backend, managed and built with Maven, deployed on Tomcat 9.

05 — MarketHub — eBay-Style Multi-Vendor E-Commerce Marketplace

[PHP 8](#) · [MySQL](#) · [HTML5](#) · [CSS3](#) · [JavaScript \(Vanilla\)](#) · [PDO](#) · [PHPMailer](#) · [XAMPP](#) / [Apache](#)

Full-featured multi-vendor marketplace inspired by eBay, supporting three roles: Seller, Customer, and Admin. Sellers can list, edit, and manage products with individual storefronts; customers can browse, search, add to cart, and place orders. Admin dashboard handles user management, product moderation, and platform analytics. Secure authentication, PDO-based data access, and transactional email notifications via PHPMailer.

06 — POS System — Point of Sale Management

[PHP 8](#) · [MySQL](#) · [HTML5](#) · [CSS3](#) · [JavaScript \(Vanilla\)](#) · [PDO](#) · [XAMPP](#) / [Apache](#)

Retail point-of-sale system featuring barcode-based product lookup, real-time inventory management, sales transaction processing, and receipt generation. Supports multiple cashier accounts with role-based access. Admin dashboard provides sales reports, daily summaries, and low-stock alerts. Built with PHP and PDO prepared statements on a MySQL backend, hosted on XAMPP.

07 — Job Fraud Detection System in Sinhala — AI/ML

[Python](#) · [Scikit-learn](#) · [NLP](#) · [Sinhala Language Processing](#) · [Pandas](#) · [NumPy](#) · [Flask](#)

AI/ML-powered system to detect fraudulent job advertisements written in Sinhala, addressing a largely underserved NLP domain. Implements text preprocessing and tokenization tailored for the Sinhala script, feature extraction via TF-IDF, and multi-model classification (Naive Bayes, SVM, Random Forest). Trained on a labelled dataset of legitimate and fraudulent Sinhala job postings. Exposed via a Flask REST API for real-time prediction, helping job seekers identify scam listings.

EDUCATION

BSc (Hons) Software Engineering Cardiff Metropolitan University	2025 – 2026
Higher Diploma — Software Computing & Engineering Cardiff Metropolitan University	2022 – 2024
Diploma — Information Technology & English Esoft Metro Campus	2021 – 2022
